

Development of Narcissism - Explanation of Variable Names

- artid: article ID
- author: author(s) of article
- pubyear: publication year
- pubtype: publication type (1 = journal article, 2 = dissertation, 3 = book or chapter, 4 = unpublished, 5 = other)
- inclusion: inclusion of article (1 = include, 2 = exclude)
- exclreas: reason for exclusion of article
- sampid: sample ID
- sampname: name of sample
- studyname: name of study
- otherref: reference when sample used also in other study
- samptype: sample type (1 = nationally representative, 2 = college/university students, 3 = clinical–personality disorder, 4 = clinical–other, 5 = community)
- n: sample size
- country: country in which sample was collected
- female: proportion of female participants (in percent)
- ethn: ethnicity (1 = predominantly White/European, 2 = predominantly Black, 3 = predominantly Asian, 4 = predominantly Hispanic/Latin American, 5 = predominantly Native American, 6 = mixed; “predominantly” was defined as 80% and more)
- measure: measure coded
- outcome: outcome coded
- outcome2: factors of narcissism to which the measure was assigned
- factor: factor variable used in the main analyses
- factor2: factor variable used in the sensitivity analyses
- reverse: reverse-coded (1 = no, 2 = high values indicate low narcissism)
- meastype: type of measure (1 = self-report, 2 = informant report, 3 = observer report, 4 = other)
- **rel: reliability of measure**
- t1year: year of Time 1 assessment
- agem1: mean age at Time 1
- agesd1: standard deviation of age at Time 1
- interval: interval on which effect size is based (1st digit = wave at beginning of interval, 2nd digit = wave at end of interval)
- agem1i: mean age at beginning of interval on which effect size is based
- outm1: mean narcissism (wave at beginning of interval)
- outsd1: standard deviation of narcissism (wave at beginning of interval)
- outm2: mean narcissism (wave at end of interval)
- outsd2: standard deviation of narcissism (wave at end of interval)
- timelag: time lag between assessments
- corr: test-retest correlation
- pubstatus: effect size data published vs. unpublished (0 = unpublished, 1 = published)
